THE SOCIAL OS

Your people. Your pulse.

VYBE is one identity across two rooms: Circle for the people you chose, Pulse for the world in motion.

Friends live in one app. Discovery lives in another.

Instagram kept the people you know. TikTok took the camera. Every creator, and every teenager, now runs two lives — and two brands — to do both.

We trained a generation to split themselves.

The close graph stalled

Follow graphs optimized for ads, not friends. Chronological intimacy is an afterthought on platforms built for reach.

The open graph is a stranger

Short video found a new camera language — and left your actual Circle behind. Discovery without belonging.

Identity is the tax

People maintain two handles, two aesthetics, two audiences. The software made them do it.

THE BET

Closeness and discovery are different verbs.

One ranking function cannot serve a best friend and a billion strangers. The fix is not a better algorithm. It is two rooms, one name.

One identity. Two rooms.

CIRCLE

From people you chose.

Follow graph, chronological
Text, image, video
Quiet on purpose

PULSE

From the world, in motion.

Public short video
Ranked by taste, not followers
The same creator, a second room

CIRCLE

The feed that used to exist.

People you follow, in the order they posted. Captions that can be a paragraph. Images that do not autoplay. A home, not a slot machine.

- Follow, unfollow, block — a real social graph
- Posts: text, image, or video
- Like, comment, share, save
- Hashtags without turning friends into SEO

PULSE

A public square that does not invade the house.

Full-screen vertical video. Swipe. Sound. Reach that is not gated by how many friends you collected in high school.

- Same username, separate ranking
- For You, following, and tags
- Create once — publish to Circle, Pulse, or both
- Friends never compete with strangers in the same scroll

A dual graph, not a feature flag.

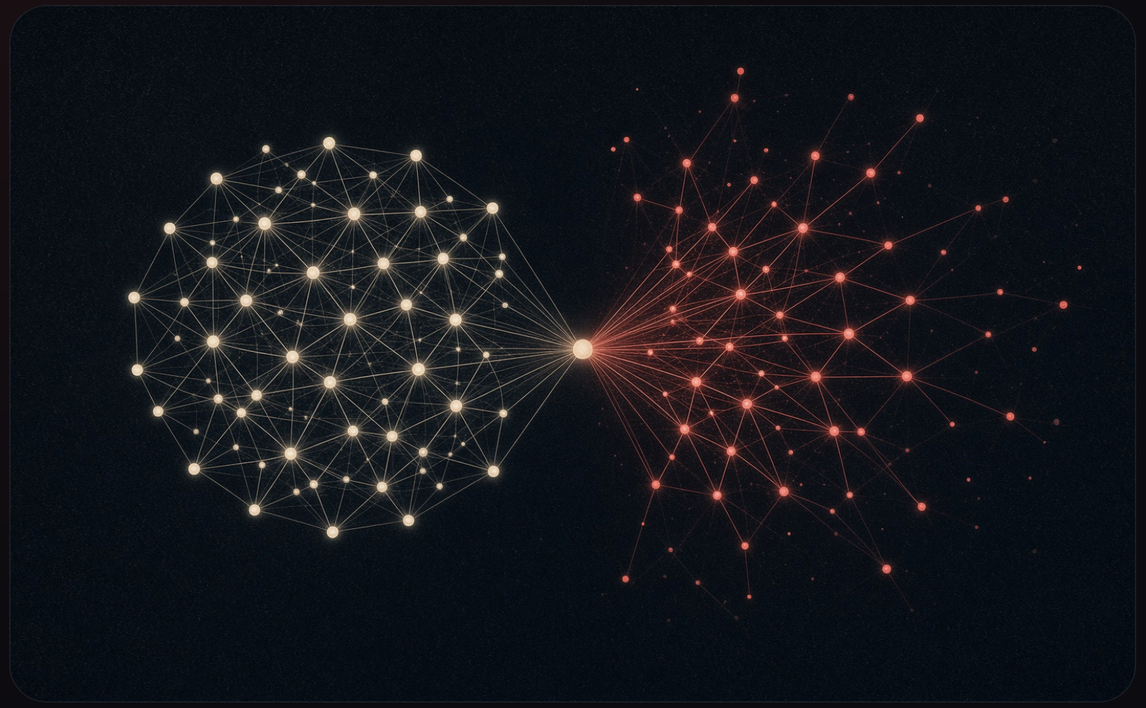

01 Identity — one user, one username, hashed credentials, sessions.

02 Graph — follow edges that power Circle, never Pulse ranking.

03 Content — posts and media with a room, not a generic blob.

04 Signals — likes, comments, saves, shares, notifications.

05 Safety — report, review, suspend. Trust is the product.

Not another For You page. A social OS with two rooms.

One name

Creators stop running twin brands. Friends always know where to find you.

Two rankings

Circle stays chronological. Pulse can be ambitious. Neither poisons the other.

Taste, not scale

A small Circle is a feature. Pulse is where a clip can still leave the room.

The camera already split. The software has not.

2 lives

Every young user already keeps a friends app and a discovery app.

1 camera

Short video is the default way a generation records the world.

0 homes

No major product is natively both — so people duct-tape identity.

Social remains the largest consumer-internet surface. The opening is not “beat TikTok at TikTok.” It is to own the seam between belonging and broadcast.

Monetize the square. Protect the house.

Pulse is public, so it can carry ads, branded missions, and later, creator commerce. Circle is a home. We do not rank friends for a brand manager.

- Pulse advertising — native, skippable, never in Circle
- Creator tools on Pulse reach, once the graph is real
- Never sell the follow graph. Trust is the lock-in.

Thirteen phases. Shipping in public.

01–02

Foundation + identity

Design system, auth, unique usernames, sessions.

03–05

Graph + rooms

Profiles, follow, Circle feed, Pulse player.

06–08

Publish + engage

Text, image, video. Likes, comments, share, save.

09–10

Find + notify

Hashtags, search, a real notifications inbox.

11–12

Trust

Reporting, moderation, admin. The product is only as good as this.

13

Harden

Performance, polish, the seams that make it feel inevitable.

Join the Circle.
Ride the Pulse.

VYBE — one identity, two rooms. Built for people who refuse to split themselves to be seen.
